Floating Pill Bar (som2.bar)

A macOS-style floating status bar for Omarchy 4 "Quattro": a rounded, translucent glass pill that floats just off the top edge, spans the same width as your windows, and drops a soft shadow. Double-tap transparency toggle and all stock bar gestures still work.

Built as a user plugin clone of the stock `omarchy.bar`, so nothing in `/usr/share/omarchy/` is modified and system updates can't clobber it.

what it looks like — rounded frosted pill, 4px margins, floats 4px off the top edge

---

Why a clone instead of editing the stock bar

`/usr/share/omarchy/shell/plugins/bar/Bar.qml` is Omarchy-owned and gets overwritten on update. The clone lives at `~/.config/omarchy/plugins/som2.bar/` and survives updates. It also removes the `required` keyword from three properties (`omarchyPath`, `barWidgetRegistry`, `barConfig`) that the stock `Bar.qml` declares — Omarchy's plugin loader can't load bar clones that declare them.

What the pill styling changes

All changes are inside `component BarPanel: PanelWindow` in `Bar.qml`:

- **Window**: `color: "transparent"` + `surfaceFormat.opaque: false`, and the window is made taller/wider than the bar (`barSize + margins + shadow pad`) so the floating margins and drop shadow aren't clipped.
- **Pill**: a `Rectangle` (`id: pill`) inside the window with `radius: height / 2`, side margins `Style.space(4)`, top margin `Style.space(4)`, color `Qt.rgba(0.05, 0.05, 0.09, 0.62)` (0.45 when the transparency toggle is on), a 1px hairline border, and a `QtQuick.Effects.MultiEffect` drop shadow (blur 1.0, y-offset 6).
- **Content**: the module `Loader` is anchored inside the same margins so widgets sit on the pill.
- **Autohide parking**: the stock code parks a hidden bar with `margins.top: -root.barSize`. Since the window is now taller than `barSize`, the parking margins use the full window height (`-(barSize + pillTopMargin + pillShadowPad)`) or the bottom of the pill would peek on screen.

The `toggleTransparency()` / `root.transparent` logic is untouched — double-tap still flips between the two glass opacities.

Install

```
cd omarchy-setup
mkdir -p ~/.config/omarchy/plugins/som2.bar
cp -r bar-plugin/Bar.qml bar-plugin/BarModel.js bar-plugin/manifest.json \
      bar-plugin/widgets bar-plugin/indicators \
      ~/.config/omarchy/plugins/som2.bar/

# enable the clone, disable the stock bar
omarchy plugin enable som2.bar
```

```
omarchy plugin disable omarchy.bar
omarchy restart shell
```

Verify:

```
omarchy-shell shell listPlugins | grep -A2 bar
# som2.bar  enabled: true  active: true
# omarchy.bar enabled: false active: false
```

Autohide integration (quattrobar-autohide)

`~/.local/bin/quattrobar-autohide` (copy in `scripts/`) hides the bar when a window overlaps it and reveals it when the cursor touches the top edge. Two changes were needed for the clone:

1. The shell nudge after flipping the `bar-off` flag targets the clone's IPC handler: `omarchy-shell -q som2.bar syncHidden` (was `omarchy.bar`). The clone's `IpcHandler` target in `Bar.qml` is likewise `som2.bar`.
2. `QUATTROBAR_AUTOHIDE_BAR_HEIGHT` default raised 26 → 34 because the pill floats 4px lower and the window is taller.

The script is autostarted from `~/.config/hypr/autostart.lua` (`o.launch_on_start("quattrobar-autohide")`). After editing, restart it:

```
pkill -f quattrobar-autohide
setsid nohup ~/.local/bin/quattrobar-autohide >/dev/null 2>&1 &
```

Tuning

In `Bar.qml`, inside `component BarPanel`:

Knob	Property	Default
Side gap	`pillMargin`	`Style.space(4)`
Top gap	`pillTopMargin`	`Style.space(4)`
Shadow room	`pillShadowPad`	`Style.space(10)`
Roundness	pill `radius`	`height / 2` (full pill)
Glass (normal)	pill `color` second branch	alpha `0.62`
Glass (transparent mode)	pill `color` first branch	alpha `0.45`
Shadow	`MultiEffect` in `layer.effect`	blur 1.0, y 6

After editing `Bar.qml` reload the bar and check for errors:

```
omarchy restart shell
journalctl --user -b | grep som2.bar
```

The estimator is $\hat{\beta} = (X^\top X)^{-1} X^\top y$, and its variance is

$$\mathrm{Var}(\hat{\beta}) = \sigma^2 (X^\top X)^{-1}$$

```
flowchart LR
  notes[Notes] --> draft[Draft]
  draft --> pdf[PDF]
  refs[(refs.bib)] --> draft
```

Revert

```
omarchy plugin disable som2.bar
omarchy plugin enable omarchy.bar
omarchy restart shell
rm -rf ~/.config/omarchy/plugins/som2.bar
```

And restore the stock autohide nudge target (`omarchy.bar`) in `~/.local/bin/quattrobar-autohide` if you keep using it.
